

**New
editions for
September
2009!**

Dear valued customer,

New editions of the bestselling series for able pupils!

As you know, **Longman 11–14 Biology, Chemistry and Physics** have proved their ability to motivate and challenge able pupils with their academic, rigorous and in-depth approach to science for many years.

These new editions keep **the same trusted approach** and **the same structure** that we know works in your classroom. They have been updated to give year 7-9 pupils the best possible preparation for GCSE – whether you offer GCSE or IGCSE.

The inclusion of specific **How Science Works** sections brings the books into line with both the new National Curriculum, and the skills pupils will be expected to go on to demonstrate at GCSE. However, these are clearly designated so that you can use as little or as much as suits your curriculum for this age range.

Plus, in response to your feedback, the books now feature **even more questions** for class or homework use.

New for this edition: Practical and Assessment Resource Packs

You've told us that Teacher Resource Packs would be a valuable addition to the series. Therefore, we're pleased to unveil the new **Practical and Assessment Resource Packs** that will accompany the books, providing practical activities, end-of-chapter tests, extension materials, question banks and much more for your high achievers.

Take a look at the enclosed leaflet to find out more about these new editions and request your inspection copies using the reply paid card. Alternatively, call our friendly customer services team on 0845 630 33 33 to place your order.

With best wishes,
