New
editions for
September
2009!

Dear Head of Science,

Motivate and challenge your able pupils

Longman 11–14 Biology, Chemistry and Physics is the only series designed specifically for the needs of able pupils and their teachers. The new editions of this well-established series have been updated to give year 7-9 pupils the best possible preparation for GCSE – whether GCSE or IGCSE – as well as now satisfying the new KS3 Programme of Study.

The books take an **in-depth, academic and rigorous** approach to their subjects to motivate and challenge your high achievers. At the same time, they are **visually appealing**, have a contemporary design and are **packed with questions** to help monitor progress.

Structured to match the way you teach, these books are easy to implement across two or three years, while the accompanying **Practical and Assessment Resource Packs** provide a wealth of practicals, question banks and skills activities to help save you time.

Give your pupils the best possible foundation for GCSE

How Science Works sections have been specifically designed to prepare pupils for the skills they'll be expected to demonstrate on their GCSE courses. These are clearly designated so that you can introduce as little or as much HSW as suits your curriculum for this age range.

Take a look at the enclosed leaflet to find out more about these new editions and request your inspection copies using the reply paid card. Alternatively, call our friendly customer services team on 0845 630 33 33 to place your order.

With best wishes,

Nayeli Wild
